# LinkedIn Top Skills 2016

The interpretations from the visualization are,

1. All the countries are participating when it comes to Statistical Analysis and Data Mining.

I wanted to check for which skill all the countries have ranking data. From the image its visible, dashed lines are available for all the countries for the skill "Statistical Analysis and Data Mining". It means all the countries are participating in the Global Average Ranking estimation for that skills. The global average rank is 2 on scale of 10. Seven countries have the higher ranking than global ranking, and three has lower ranking. Three countries have same ranking as global average ranking.
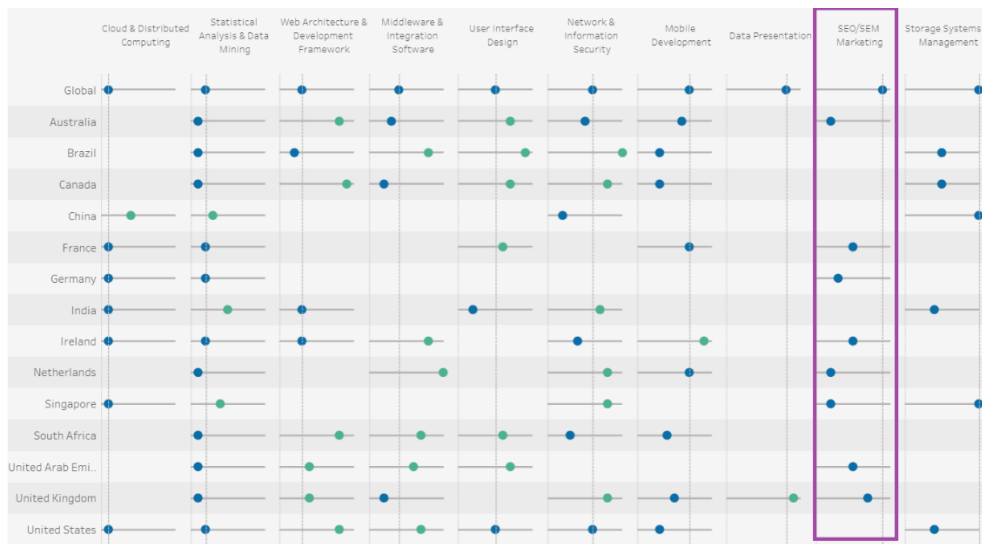

2. For the skills "User Interface Design", "Web Architecture & Development Framework", "Middleware & Integration Software", and "Network & Information Security", most of the countries ranking is lower than Global Ranking.

I wanted to interpret in case of which skills, maximum countries in this visualization are lagging behind the global average ranking. So, I considered where there are more green dots available, and I found four skills.

From the marked sections, it can be interpreted that most of the dots are green dots. It means the ranking is lower than the Global Average Ranking. So these countries are lagging behind in these four skills.

3. Most of the countries have started to acquire the skill on "SEO/SEM Marketing" and their ranking is higher than global average ranking.

I wanted to interpret in which field, the countries have higher ranking than global ranking, and I checked the blue dots. For two skills, "SEO/SEM Marketing" and "Storage Systems and Management" have all blue dots and no green dots. But, in case of "Storage Systems and Management", few countries has same ranking as global ranking. So, it's also discarded from consideration.

The Global Ranking is very low for SEO/SEM Marketing skill till now. But most of the countries are doing very well in this skill, and the blue dots are showing that all of their ranking is higher than global ranking. China, Netherlands and Singapore are on the same ranking 2.
